IMENCO Latches

The Latches and bullets are designed to be used for to lift an ROV out of the water, without using the umbilical for lifting in air. The bullet is attached to the main structure, thus taking the load off the umbilical.

Can be equipped with additional x/y joint and/or mounting rail.

Features

- Bullet, locking dogs and handle is made from high strength steel.
- Main body made of seawater resistant Aluminium.
- Door to allow for entering of umbilical into the latch.
- Handle will fit a shackle of same capacity as the latch.
- The standard bullet does not allow for load termination inside of the bullet. Load termination of the umbilical must be done elsewhere.
- Specially designed bullets for load terminating in the bullet may be designed. This is dependent of the umbilical design.
